# KHEOPE Sail From KE Enhances And Respects Every Kind Of Outdoor Space

**K**E design is distinguished by a constant aesthetic and technological research, which aims to be the perfect integration of sun protection systems that fit all different types of architectural forms

Inspired by the sea, the SAILS range, with fabrics and marine-derived technology, are designed to protect from the sun, resist weathering and of course, salt corrosion.

A sun shading range that offers wide dimensions, different installation system and home automation elements.

Among the other sails, KHEOPE stands out as a large shading sail, which covers an important area, representing an innovative choice for the sun protection of tomorrow. The steel structure and the nautical materials ensure great functionality and lightweight design.

Kheope is a modern shading structure that enhances open-air areas: thanks to its sleek design, it easily adapts to different landscapes. Polished steel and sailing materials are the expression of innovation with a keen eye for details, along with KE outstanding quality standards.

Kheope is configured with a motorized handling and an exclusive anemometer ensures automatic closure in case of strong winds.

Thanks to its high versatility, Kheope is the ideal solution to offer both elegance and comfort in the home, in public areas and commercial spaces (hotels, bars, swimming pools, marine, etc.).

#### Technical features:

**Kheope – motorized sail shading system**

**Dimensions:** maximum 7 m x 7 m or customized upon demand  
1 mast, 3 poles Sail structure in 304 electropolished stainless steel (masts and brackets); the boom is in anodized aluminium.

**Available fabrics:** nautical Dacron fabric white, sand and bordeaux.

The thread is made of braided polyester treated to increase resistance to weathering and corrosion.

Also available in **waterproof resin-coated** Tempotestar and Starlight fabrics

Single and elegant **motor with steel cover cassette**. Made with screw with no end, with double independent slots to recover the sail top with different angles.

The sliders guarantee the movement and the top is made with steel to ensure the sealing safety.

Wind resistance **Class 1** tested according to EN 13561/2015
